(10 marks)

SECTION B: READING COMPREHENSION [20 MARKS]

Instructions: Read the passage carefully and answer **ALL** questions from 21-40. Shade your answers on the **OMR** sheet.

Are you drinking enough water? Many children are not. The human body is made up of 60% water. It regulates or controls body temperature and delivers oxygen all over the body. Water also helps in breaking down the food that we eat into other substances so that our bodies can use. This is called digestion. Without digestion, we could not absorb food into our bodies and use it.

When your body is dehydrated, it means you are not drinking enough water. This can lead to health problems such as headaches, poor physical performance, and even more serious issues. Your body needs more water when you are in hot climates, when you are physically active, and if you have a fever. 10

On average, children need between 10 to 14 cups of water every day to stay hydrated. Your body is hydrated when you drink enough water. This water can come from a mix of drinks and foods that contain high amounts of water, such as celery, melons, or tomatoes. It is also recommended that fluids come from water instead of sugary drinks that are too sweet, high in calories and can lead to weight problems. 15

"The good news is that this is a public health problem with a simple solution," said Steven Gortmaker, a professor of health sociology at Harvard University. "To solve this problem, we should think of interesting ways to encourage children to drink more water. One of the ways is to pack water in colorful and creative bottles. When children have better hydration status, it may allow them to feel better throughout the day and do better in school." 20

Steven Gortmaker also gave a few tips on how to stay hydrated. The first suggestion is to carry a water bottle for easy access to water. Next, you can also substitute water for of sugar-sweetened beverages. Generally, when you choose water over sugar-sweetened drinks, you will save money and reduce calories. Finally, you can also add a few drops of lime or lemon into your water. This may improve the taste, and you might drink more water than you usually do. 25
